

Vehicle = { Vin (PK), Price, Model }

* I labeled PK and FK just in case*

Car = { Vin (FK), engine-size }

Truck = { Vin (FK), Tonnage }

SUV = { Vin (FK), No_seats }

I'm not sure if I needed "Vin" or not because these are disjoint, there shouldn't be any intersects between each set. But, I included "Vin" just in case so you know it's related to "Vehicle" entity.

Sale = { Vin (FK), Ssn (FK), Sid (FK), Date }

Salesperson = { Sid (PK), Name }

Customer = { Ssn (PK), Name, Street, City, State }

FK

PK

Car.Vin → Vehicle.Vin

Truck.Vin → Vehicle.Vin

SUV.Vin → Vehicle.Vin

Sale.Vin → Vehicle.Vin

Sale.Ssn → Customer.Ssn

Sale.Sid → Salesperson.Sid
